1. Introduction

Since 1993, CentERdata annually collects economic data through a panel that consists of some two thousand households. The purpose of this *DNB Household Survey* (formerly known as CentER Savings Survey) is to study the economic and psychological determinants of the saving behavior of households. This research project was originally part of the VSB-CentER Savings Project.

The data are collected through the Internetpanel of CentERdata (*the CentERpanel*). Participating respondents do not necessarily have to have their own computer with Internet. If a household does not have access to Internet, CentERdata provides a so-called set-top box with built-in Internet connection and, if necessary a television set as well, so that the households can fill in the questionnaires via the television set.

The 2010 wave (the 18th wave) of the DNB Household Survey was conducted over the period April – December 2010.

1.1 Six questionnaires

The DNB Household Survey consists of six questionnaires. Below, we give an overview of the topics that are covered by each of the questionnaires.

1. general information on the household;
2. household and work;
3. accommodation and mortgages;
4. health and income;
5. assets and liabilities;
6. economic and psychological concepts;

All questionnaires were presented to the CentERpanel, of which 1885 households have participated in the 18th wave. Within each household, all persons aged 16 or over were interviewed. The response rate of each questionnaire is presented in table 1 below. The section General Information on the Household includes *all* members of the household (also those under 16 years of age), and mainly consists of derived variables. The questions from this section are not presented to the respondents but are derived from other variables. For example, the province where the respondent lives is derived from the zip code.

1.2 Eight data sets

The data from the questionnaires are organized into six data sets in SPSS portable files. Files in Stata format are also available. In addition, two data sets with derived data have been created: the first one includes derived data on (personal) income (see section 1.3 below); the second one includes derived data on assets, liabilities, and mortgages (see section 1.4 below). The names of the data sets can be found in the second column of table 1.

Table 1. Response rates of the data sets

data set	subject	number of persons	number of households
1. hhi10en.por	general information on the household	4524	1885
2. wrk10en.por	household and work	2087	1552
3. hse10en.por	accommodation and mortgages	1536	1536
4. inc10en.por	health and income	1966	1487
5. wth10en.por	assets and liabilities	1941	1455
6. psy10en.por	economic and psychological concepts	2095	1566
7. agi10en.por	aggregated data on income	1966	1487
8. agw10en.por	aggregated data on assets, liabilities and mortgages	2216	1684

The files can be linked by using two variables: *nohold* (household index) and *nomem* (index of the member of the household). As *nomem* is always smaller than 100, a unique personal index can be calculated as follows:

$$nohold \times 100 + nomem$$

Table 2 provides an overview of the variables that can be found at the beginning of each data file.

Table 2. Variables at the beginning of each data file

name of the variable	description
nohold	household index
nomem	index of the member of the household

All amounts in the datasets are in euros.

1.3 Aggregated data on income

The CentER Savings Survey includes many questions about sources of income the respondents may have. On the basis of these sources of income we have calculated the total gross and the total net income on a personal level. Table 3 includes an overview of the income components that were used to calculate the aggregated data on personal income.

Table 3: Overview of the variables that were used to calculate aggregated data on personal income

Variable	Description
NOHHOLD	Household index
NOMEM	Index of member of the household
WINST	Profits [gross]
OG	Real estate income/letting of rooms [gross]
HPREM	Premium for subsidized purchase of house [gross]
BEURS	Scholarship [net]
STUDLEN	Study loan [net]
ALIM	Alimony from spouse [gross]
ALIK	Alimony for children [net]
OTOEL	Parental support for studies [net]
FTOEL	Support from family [net]
RENTE	Interest/dividends/other income [gross]
ERF	Inheritance [net]
ZKP	Premium private medical insurance
HS	Rent subsidy [net]
HG	Allowance to adjust to new rent [net]
HWF	Rateable value of accommodation [gross]
HTR	Mortgage interest payments [gross]
LOON	Pay/salary [gross]
VUT	Early retirement benefits [gross]
WG	Reduced pay [gross]
PENS	Retirement pension/annuity [gross]
WW	Unemployment benefits [gross]
ZW	Illness benefits [bruto]
ZORG	Care support [bruto]
K_OP	Children support [bruto]
WAZ	Disability benefits for self-employed, their partner/free-lancers/clergymen etc. [gross]
WAJONG	Disability benefits for persons who were already disabled at the age of 17 and therefore could not work [gross]
WAO	Disability pension [gross]
IOAW	Benefits for elderly and partly disabled unemployed/self-employed [gross]
ABW	Social assistance (US: welfare)/benefits for self-employed [gross]
AOW	General old-age pension (US: social security payments) [gross]
AWW	General widows' and orphans' pension [gross]
IB	Calculated income tax
BTOT	Total gross income
NTOT	Total net income
HEFKORT	Considered tax credit
BOX3TAX	Considered income tax box 3 (saving and investments)

The variables *nohold* and *nomem* serve to identify the data record. The variables *winst* through *aww* are based on data from the questionnaires Health and Income, and Accommodation and Mortgages. For each income component it is indicated whether it concerns a gross or a net income component. With *loon* through *aww* we have in principle used the gross amounts that were provided through the questionnaire Health and Income. In general this concerns the gross amounts as stated on the yearly income statement provided by the employer or institution, deducted by pension- and unemployment benefits, but including earnings transfer allowance (for historic reasons, employees and persons in receipt of most benefits, aged below 65, receive an earnings transfer allowance to compensate them for increases in employee contributions to peoples' insurance contributions) and employer's contribution towards health insurance c.q. employer's premiums for health insurance. If a respondent did not know the gross amount, he/she was asked to indicate the interval in which the amount would be (i.e. between x and y euro). In that case for calculating the total income the middle of the given interval is used $((x+y)/2)$. (The variable *extensie_c* is used to indicate if the amount is the middle of such an interval.) If the gross amount could not be given as an interval either, one could give the net amount. In that case, the net amount was converted into a gross amount. If a respondent has more than one employer, the variable *loon* is calculated by adding up the gross amounts of all employers. Total gross income is calculated as follows:

$$btot = loon + vut + pens + wao + ww + wg + aow + aww + abw + waz + wajong + ioaw + alim + \max(winst,0) + hprem + hwf.$$

The total gross income is unknown (has a 'missing value') if (in the equation mentioned above) one of the income components from *loon* through *alim* is unknown. If one of the other components (from *winst* through *hwf*) is unknown, we consider this amount to be equal to zero in the calculation of the gross income. Note that negative alimony (paid alimony) is subtracted from the gross income, but that a negative profit (a loss) is not. Income tax *ib* is calculated on the basis of the taxable components of the total gross income. The social security premiums are also included in *ib*. Because of the tax revision in 2001, the tax on income out of savings and investments ('box 3') is included in *ib* as well. This *box3tax* is calculated by multiplying the relevant tax rate with the taxable components of the capital as determined on the basis of the aggregated capital components (as described in section 1.4). Possible income in box 2 (income from considerable interest (i.e. income received by shareholders owning more than 5% of the shares in a company)) are not taken into account. The aggregated data set also contains the variable *hefkort*. This variable presents the amount of tax credit taken into consideration when calculating *ib*. In the calculation of the income tax *ib* is the mortgage deduction *htr* taken into account. The tax on income in box 3 is also taken into account.

$$ntot = btot - ib + alik + beurs + studlen + otoel + ftoel + erf + hs + hg + \min(0, winst) + \min(alim, 0) + rente + og.$$

Note that for the calculation of the net income, a negative profit (loss) and negative alimony (paid alimony) are added to the gross income (a negative number is added). Furthermore, looking at the equations mentioned above, we see that the total gross income is not necessarily greater or equal to the total net income. For example, a student who receives only a scholarship or parental support has a gross income equal to zero, while his net income is greater than zero.

1.4 Aggregated data on assets, liabilities and mortgages

Introduction

The data of the DNB Household Survey contain very detailed information on assets, liabilities and mortgages. For some purposes, however, it is more convenient to have aggregated data available. Therefore, we have created a new data set consisting of the ‘main components’ for asset, debt and mortgage. For each of these main components the total amount of money associated with the component was calculated. This has been done on an individual level (not on the household level).

A listing of the main asset, debt and mortgage components can be found in table 4 below. In the text below we also refer to subcomponents. By subcomponents we mean the separate elements that make up the main component. For example, the subcomponents of the main component ‘checking accounts’ include the total number of separate checking accounts a respondent may have.

Construction of new variables

For each main asset component we have constructed the following three variables:

- A. the number of subcomponents of the main asset component reported by the respondent.
- B. the total amount of money associated with the main asset component.
- C. the *missing value flag*, which indicates the number of *don't know* answers.

The ‘A’ variable indicates the number of subcomponents that a respondent claims to have. For example, if a respondent claims to have four deposit books, then the ‘A’ variable for the asset component ‘deposit books’ has the value ‘4’. For some main asset components (for example, the employer-sponsored savings plan) the ‘A’ variable indicates a mere ‘yes’ or ‘no’: a respondent either has an employer-sponsored savings plan (the ‘A’ variable has the value ‘1’) or does not have an employer-sponsored savings plan (the ‘A’ variable has the value ‘0’).

The ‘B’ variable indicates the total amount of money associated with the main asset component. The total amount is computed from the amounts of the subcomponents. If a respondent knows all the amounts of the subcomponents of the main asset component, the computation is straightforward. If a respondent does not know the exact amounts, or does not know the amount at all, the computation of the ‘B’ variable is more complicated. We will explain this below when we discuss the treatment of *don't know* answers and *bracketed* answers.

The ‘C’ variable indicates the number of times that the respondent does not know the exact amount or does not know the amount at all with respect to a certain asset component. We will refer to the value of the ‘C’ variable as the *missing value flag*. Its exact meaning will be explained below.

The treatment of don't know answers and bracketed answers

If a respondent doesn't know the amount of a certain subcomponent, the respondent is asked to select an answer from a series of bracketed answers (e.g. between 0 and 500 euros, between 500 and 1000 euros, between 1000 and 2000 euros etc.). The last answer in the series of bracketed answers is, for example, “50,000 euros or more”. If the respondent does not select an answer from the bracketed answers, we consider his answer to be a *don't know* answer.

If a respondent reports a bracketed answer, we add the middle value of the bracket to the total amount of that main asset component. For example, if a respondent reports ‘between 1000 and 2000 euros we add 1500 euros to the total amount. In case of a *final bracket* answer (e.g. ‘more than 50,000 euros’), we add the lower bound of the *final bracket* (50,000 euros) to the total amount.

In the case of a *don't know* answer, we look at the average value of the amount of this specific component as determined in the last two years. If then, *don't know* answers were given as well, the *missing value flag* is set on 100, if the respondent did not fill in the asset questionnaire over the past two years, the value of the *missing value flag* is increased by one.

Main asset, debt, and mortgage components

From the questionnaire ‘Assets and liabilities’ we obtain in total twenty-five main asset components (B1-B4, B6-B8, B11-B25, B28-B30), eight debt components (S1 through S8), and one mortgage component (B19Hy). From the questionnaire ‘Accommodation and mortgages’ we obtain two main asset components (B26OG and B27OG) and two mortgage components (B26HY and B27HY).

Questionnaire Assets and Liabilities

B1	Checking accounts
B2	Employer-sponsored savings plans (1=Yes, 0=No)
B3	Savings or deposit accounts
B4	Deposit books
B6	Savings certificates
B7	Single-premium annuity insurance policies
B8	Savings or endowment insurance policies
B11	Growth funds
B12	Mutual funds and/or mutual fund accounts
B13	Bonds and/or mortgage bonds
B14	Stocks and shares
B15	Put-options bought (1=Yes, 0=No)
B16	Put-options written (1=Yes, 0=No)
B17	Call-options bought (1=Yes, 0=No)
B18	Call-options written (1=Yes, 0=No)
B19Og	Pieces of real estate, not being used for own accommodation
B19Hy	Mortgages on pieces of real estate, not being used for own accommodation
B20	Cars
B21	Motorbikes
B22	Boats
B23	Caravans
B24	Money lent out to family or friends (1=Yes, 0=No)
B25	Savings or investments not mentioned before
B28	stocks from substantial holding
B29	Indicator business equity (professions)
B30	Indicator business equity self-employed
S1	Private loans
S2	Extended lines of credit
S3	Outstanding debts on hire-purchase contracts, debts based on payment by installment and/or equity-based loans
S4	Outstanding debts with mail-order firms, shops or other sorts of retail business
S5	Loans from family or friends
S6	Study loans
S7	Credit card debts (1=Yes, 0=No)
S8	Loans not mentioned before
X1	Checking accounts with deficit balances

Questionnaire Accommodation and Mortgages

B26OG	Owner of house (1=Yes, 0=No)
B26HY	Mortgages on house
B27OG	Owner of a second house (1=Yes, 0=No)
B27HY	Mortgages on second house

For most of the main components, in cases in which the *missing value flag* is positive (*don't know* answers that could not be filled in with information over the previous two years) an imputed value was used. The imputation procedure can be summarized as follows: using those observations where the *missing value flag* is zero, a regression equation for the main component in question is estimated taking into account as many relevant characteristics of the persons involved as possible. On that basis, in case of a positive *missing value flag* a value can be predicted, to which an error term is added based on the observed distribution of error terms. More information on this procedure can be obtained upon request.

From 2005 the variables x1a, x1b en x1c have been added to the data file. The meaning of the variables is respectively the number of checking accounts with deficit balances, the total balance of checking accounts with deficit balances, and a missing value flag for checking accounts with deficit balances. The total balance has been imputed if amounts are unknown; in those cases b1b also was revised.

1.5 Set-up of the documentation

The set-up of the documentation of the DNB Household Survey follows the division into the six questionnaires that were mentioned in table 1. Chapters 2 through 8 of this documentation include a description of these questionnaires (all the questions and answer texts, and the routing).

In this documentation, the frequencies of the answers of the respondents have not been included. To compensate for this, the appendices include for each questionnaire a short description of the variables ('descriptive statistics'). In these descriptions, for each variable the number of responses, and the minimum and maximum values have been included.

The data were collected by using the computer program Blaise. Computer-controlled surveys are very flexible. In the documentation we try to present the electronic version as accurate as possible. As an example, we will look at the question about marital status. The name of the question (variable) is printed to the left, in capitals (*burgst*). After that, the text of the question and the answer options follow. The number before each answer option corresponds with the value of the variable in the data set. Each answer option is followed by the name of the following question to be presented to the respondent (the routing). With answers 1 thru 5, the next question presented to the respondent is *jrbs*. With answer 6, the next question presented to the respondent is *kk*.

BURGST

What is your marital status?

- | | |
|---|------|
| 1 married or registered partnership (including separated), having community of property | JRBS |
| 2 married or registered partnership (including separated), with a marriage settlement | JRBS |
| 3 divorced from spouse | JRBS |
| 4 living together with partner (not married) | JRBS |
| 5 widowed | JRBS |
| 6 never married..... | KK |

In some cases we have introduced an auxiliary variable for routing purposes (indicated as *routing variable*). These routing variables do not appear in the data set, but are only included in the documentation to indicate the routing. Another advantage of computer-controlled surveys is the possibility to do text imputations: depending on earlier answers, a particular phrase may be imputed. For example, question *jrbs* concerns the year that the current marital status was established. Depending on the answer to the (earlier) question concerning marital status, the questions are phrased in a different way. In the documentation, this is presented as follows:

JRBS [if married or registered partnership]

When (which year) did you get married or was your partnership registered? If you were married or had a registered partnership more than once, please give the date of the last marriage or registration..... MNDBS

[if divorced]

When (which year) did you get your divorce?

[if living together with partner (not married)]

When (which year) did you start living together?

[if widowed]

When (which year) did you become widowed?

Another application of text imputation is to include an earlier answer in a later question. For example:

IJ161 thru IJ163

What was your total gross income over the year 2004 received from [NAME EMPLOYER]?

If you really don't know, use "don't know".

amount in euros:

don't know.....

Variables that are the result of an ‘open answer’ question (verbal answer) are not included in the data set. However, we do include those questions in the documentation. When ‘(string)’ is printed after the variable name, this indicates that it concerns an ‘open answer’ question. For example:

RVUT	Why did you use the early retirement arrangement?	
	1 bad health.....	BET
	2 reorganization of company/organization	BET
	3 because I wanted to and it was possible.....	BET
	4 other reason.....	ARVUT
ARVUT (string)	What other reason was this?	BET

1.6 Differences between the questionnaires of 2010 and 2009

The data collection of the 18th wave (2010) differs to some extent from the previous waves.

Questions DNB

From 2003 extra questions for DNB have been added to the savings questionnaire. These questions are marked with an asterisk (*). The data collected through these questions are for the researchers of the DNB, but will become available to other researchers immediately since the year 2007.

In the remainder of this paragraph information (per section) is given on which variables are no longer part of the savings project and which variables are added in 2010.

We now would like to ask you a question about the minimum pay you would accept in another job. Imagine all financial circumstances, apart from the pay, to be equal to those in your current position. Say someone offers you a job which covers the same sort of work as you do now, and which is in the same city/town where you work now. How much would then the minimum TAKE-HOME pay have to be such that you would accept that new job?

If you would never accept that new job, tick the answer 'No' in the 'I would do this' column. You do not need to fill in the TAKE-HOME pay and the period then.

AANTALH

How many new mortgages have you taken out then?

number of mortgagesWO49

WO49 How many mortgages are there on this accommodation? There is more than one mortgage on your accommodation if you have taken out a second mortgage, or if you have taken out a mortgage consisting of different kinds of mortgages (e.g. a combination of an improved life-insurance mortgage and a no-repayment mortgage).
number of mortgages: HYP11

ANNUITY MORTGAGE: with an annuity mortgage, the total amount of your periodic payments on interest and repayment remains the same (at least) during the period for which the interest rate was fixed. During the first part of this period, the amount due consists of a relatively large part of interest and a relatively small part of repayment. In later years, it is the other way around.

TRADITIONAL LIFE-INSURANCE MORTGAGE: this sort of mortgage consists of a loan and a life-insurance policy. The idea is that there is no repayment, but only paying interest on the loan, and paying a premium for the life-insurance policy. There is no direct relation between the interest rate of the mortgage loan and the savings interest rate of the life-insurance policy (in contrast with an improved life-insurance mortgage, where there is a relation between those two interest rates).

IMPROVED LIFE-INSURANCE MORTGAGE: this is a modernized version of a traditional life-insurance mortgage. An improved life-insurance mortgage consists of a loan and a life-insurance policy. The idea is that there is no repayment, but only paying interest on the loan, and paying a premium for the life-insurance policy. In this case, the interest rate of the mortgage-loan and the savings interest rate of the life-insurance policy are related, which causes monthly net-costs to be rather stable.

LINEAR MORTGAGE: with this sort of mortgage, the periodic payments include paying off a fixed percentage of the total mortgage loan, and paying interest on the loan that is left at that moment. Over time, the amount you pay on interest becomes less and less, such that total monthly costs go down through the years. In the first period of the term of the mortgage, the costs of a linear mortgage are higher than the costs of an annuity mortgage.

ENDOWMENT MORTGAGE: with an endowment mortgage it is possible, during the term of the mortgage, to get a new loan on (part of) the amount that you have already paid off.

INVESTMENT MORTGAGE: this is a new variation on the (traditional) life-insurance mortgage. As is the case with the other life-insurance mortgages, also for most of the investment mortgages the loan is paid off out of the benefits of a whole life-insurance policy linked to the mortgage at the end of the mortgage period. Contrary to a(n improved) life-insurance mortgage, the returns of the life-insurance policy are based on the returns of an investment portfolio.

INTEREST ONLY: With this mortgage one only pays interest during the term of the mortgage with a balloon payment due at the end.

ANNUITY CONSTRUCTION: During the term of the mortgage one pays interest only, but at the same time one contributes to an annuity, which becomes available at the end of the mortgage period. The annuity does not have to be used to pay off the mortgage at the end of the mortgage period. It can be used as a supplementary pension provision.

LIFE-INSURANCE: the lifelong mortgage with life-insurance is a variation on the interest only mortgage. This mortgage is taken out for an indefinite period. To be sure that the mortgage is paid off after death (at the latest), the mortgage holds a term life-insurance policy.

The next variables are about the mortgages people can have on their CURRENT accommodation (up to a maximum of 5 mortgages). The variables have 2 digits. The first digit indicates the number of the question, the second digit indicates which mortgage it concerns (1st thru 5th).

6. Questionnaire Assets and Liabilities

6.1 Assets

This part of the questionnaire concerns assets and liabilities. The following questions concern your own ASSETS.

The following questions will also be presented to other household members aged 16 years or over. To prevent double reporting, JOINT assets should be mentioned by one member of the household only. The member of the household who is responsible for paying bills etc. has been selected to report not only personal assets but also joint assets of the household.

If you are not entirely sure what a certain term means, you can click on the term if it is given in blue and is underlined. You will then receive additional information about this term. (*Some of this extra information is given in this documentation in between questions.*)

Note: the exact routing in the questionnaire sometimes deviates from the routing indicated below. All questions on assets are asked first in the questionnaire, followed by more detailed questions on a particular component. However, here the detailed questions on a particular component are given right after the main question, to make it more survey able.

The following questions are repeated for a maximum of five checking accounts. When answering these questions, the respondent should keep in mind the five most important CHECKING ACCOUNTS.

The questions below are repeated a maximum of five times; the last number in the variable name indicates which checking account the question concerns.

*Note: the exact routing in the questionnaire deviates from the routing given here. **This applies for all components.** First of all detailed questions on a maximum of five accounts, investments etc. are asked. Then follow questions on the total balance (if respondent has more than the maximum of five accounts). BET3 thru BET5 are asked after the next questions, this applies for the checking accounts in particular.*

The following questions concern employer-sponsored savings plans.

The SAVE-AS-YOU-EARN DEDUCTION ARRANGEMENT is a kind of employer-sponsored savings plan through which a certain amount of the gross salary is deposited onto a separate savings account. Under certain conditions, the so-saved sum is not subject to income tax and no premiums for social insurance policies have to be paid on it. For each year, a maximum amount (€ 788 in 2009) can be saved in this (tax-free) way. Also, no money may be withdrawn from this particular savings account for a period of four years. There are a number of exceptions to this rule. The money saved through the save-as-you-earn deduction arrangement may for example be used to pay for the premiums for an annuity or for other life-insurance policies.

If an employee participates in a save-as-you-earn deduction arrangement and saves up to a maximum of € 788, the regular tax and premium levy applies in case of an arrangement to share in the company's profit. If one saves less than € 788, the difference can be paid to the employee free of tax in the framework of the arrangement TO SHARE IN THE COMPANY'S PROFIT or can be deposited on a frozen save-as-you-earn deduction arrangement account.

Through the SHARES-OPTION ARRANGEMENT the employer grants the employed the right to buy (option) shares of his own company. The employer may grant the employed an annual benefit of a certain maximum per year (€ 788 in 2009, including save-as-you-earn deduction and share in the company's profit arrangements).

By taking out ANNUITY INSURANCE the insured is entitled to periodic payments, the so-called annuity. The ANNUITY is paid out periodically (for example annually) as of a certain date until the time of death of the insured. PENSION INSURANCE is a specific type of annuity insurance. SINGLE-PREMIUM INSURANCE is also a specific type of annuity insurance, which involves (as the name indicates) a one-time premium. Other types of annuity insurance involve periodical (for example annual) premium payments. Under certain conditions, these premium payments are income tax deductible.

ENDOWMENT INSURANCE is a kind of life-insurance that pays out a lump sum (so, this is not an annuity) to the insured at the maturity of the insurance (or, in some cases, at the time of death of the insured, whichever comes first). The premium payments cannot be deducted from the taxable income, but the lump sum payment is under certain conditions tax free. The life-insurance which is connected to an improved traditional life-insurance mortgage is an example of an endowment insurance. With certain kinds of endowment insurance policies, the insured can decide upon the way his premium payments will be invested (for example in deposits, shares, or bonds). Sometimes one speaks of 'insured saving'.

With premium savings schemes part of the NET SALARY of the employed is withheld and saved. The employer stimulates this by adding a premium (a bonus) to the so-saved sum. The premium granted by the employer may vary between 0% and 100% of the sum saved by the employed. This premium granted by the employer is tax free and no social insurance premiums have to be paid on it provided that the total sum saved is frozen for four years and provided that the premium granted by the employer does not exceed a certain maximum per year (€ 526 in 2009).

By taking out annuity insurance the insured is entitled to periodic payments, the so-called annuity. The ANNUITY is paid out periodically (for example annually) as of a certain date until the time of death of the insured. PENSION INSURANCE is a specific type of annuity insurance. SINGLE-PREMIUM INSURANCE is also a specific type of annuity insurance, which involves (as the name indicates) a one-time premium. Other types of annuity insurance involve periodical (for example annual) premium payments. Under certain conditions, these premium payments are income tax deductible.

BZ07 Did you, in or before 2009, take out SINGLE-PREMIUM INSURANCE and/or ANNUITY INSURANCE (pension insurance), which was still in effect on 31 December 2009?

Do not include annuity insurance that you have taken out by using money from your employer-sponsored savings plan, nor include pension arrangements provided by your employer or professional pension plans here.

ENDOWMENT INSURANCE is a kind of life-insurance that pays out a lump sum (so, this is not an annuity) to the insured at the maturity of the insurance (or, in some cases, at the time of death of the insured, whichever comes first). The premium payments cannot be deducted from the taxable income, but the lump sum payment is under certain conditions tax free. The life-insurance which is connected to an improved traditional life-insurance mortgage is an example of an endowment insurance. With certain kinds of endowment insurance policies, the insured can decide upon the way his premium payments will be invested (for example in deposits, shares, or bonds).

BZ08 Did you, on 31 December 2009, have one or more ENDOWMENT INSURANCE POLICIES that were still in effect? Do not include life-insurance policies connected to an (improved) traditional life-insurance mortgage here. These will be reported later.

MUTUAL FUNDS are created by institutions that invest money from individual savers in joint programs. Thus it is possible, even with small investments, to take advantage of the joint investments (especially by spreading the investments). There are all kinds of mutual funds. The most common are 'shares-funds' (e.g. Robeco, Fortis Obam), 'bonds-funds' (such as ABN AMRO Obligatie Fonds), and 'click-funds' (such as Postbank Beleggingsfonds).

An institution that needs money can take out a loan with private or other institutions through BONDS. So, by having BONDS you participate in loans to the government, companies, or other institutions. In return, you receive interest payments while taking a low risk. A MORTGAGE BOND is an obligation/debenture issued by a mortgage bank.

BZ13 Did you, on 31 December 2009, have any BONDS and/or MORTGAGE BONDS? Do not include bonds through mutual funds here. These have already been reported on.

How many mortgages were there on your [1st thru 5th] piece of real estate on 31 December 2009? If there are no mortgages on your [1st thru 5th] piece of real estate, type 0 (zero).

answer = 0	BZ20
answer > 0	O211

The variables below concern the mortgages respondents may have on their pieces of real estate. For each piece of real estate a maximum of 3 mortgages could be recorded. The variable names all end in three digits. The first digit in each variable name indicates the number of the question, the second digit indicates the number of the piece of real estate (1st thru 5th), and the third digit indicates the number of the mortgage (1st thru 3rd). E.g. variable O123 records the answer of the respondent to the first question, about the third mortgage on his second piece of real estate.

ANNUITY MORTGAGE: with an annuity mortgage, the total amount of your periodic payments on interest and repayment remains the same (at least) during the period for which the interest rate was fixed. During the first part of this period, the amount due consists of a relatively large part of interest and a relatively small part of repayment. In later years, it is the other way around.

LINEAR MORTGAGE: with this sort of mortgage, the periodic payments include paying off a fixed percentage of the total mortgage loan, and paying interest on the loan that is left at that moment. Over time, the amount you pay on interest becomes less and less, such that total monthly costs go down through the years. In the first period of the term of the mortgage, the costs of a linear mortgage are higher than the costs of an annuity mortgage.

TRADITIONAL LIFE-INSURANCE MORTGAGE: this sort of mortgage consists of a loan and a life-insurance policy. The idea is that there is no repayment, but only paying interest on the loan, and paying a premium for the life-insurance policy. There is no direct relation between the interest rate of the mortgage loan and the savings interest rate of the life-insurance policy (in contrast with an improved life-insurance mortgage, where there is a relation between those two interest rates).

IMPROVED LIFE-INSURANCE MORTGAGE: this is a modernized version of a traditional life-insurance mortgage. An improved life-insurance mortgage consists of a loan and a life-insurance policy. The idea is that there is no repayment, but only paying interest on the loan, and paying a premium for the life-insurance policy. In this case, the interest rate of the mortgage-loan and the savings interest rate of the life-insurance policy are related, which causes monthly net-costs to be rather stable.

INVESTMENT MORTGAGE: this is a new variation on the (traditional) life-insurance mortgage. As is the case with the other life-insurance mortgages, also for most of the investment mortgages the loan is paid off out of the benefits of a whole life-insurance policy linked to the mortgage at the end of the mortgage period. Contrary to a(n improved) life-insurance mortgage, the returns of the life-insurance policy are based on the returns of an investment portfolio.

ANNUITY CONSTRUCTION: During the term of the mortgage one pays interest only, but at the same time one contributes to an annuity, which becomes available at the end of the mortgage period. The annuity does not have to be used to pay off the mortgage at the end of the mortgage period. It can be used as a supplementary pension provision.

INTEREST ONLY: With this mortgage one only pays interest during the term of the mortgage with a balloon payment due at the end.

LIFE-INSURANCE: the lifelong mortgage with life-insurance is a variation on the interest only mortgage. This mortgage is taken out for an indefinite period. To be sure that the mortgage is paid off after death (at the latest), the mortgage holds a term life-insurance policy.

ENDOWMENT MORTGAGE: with an endowment mortgage it is possible, during the term of the mortgage, to get a new loan on (part of) the amount that you have already paid off.

The following questions concern your own LIABILITIES.

The following questions will also be presented to other household members aged 16 years or over. To prevent double reporting, JOINT liabilities should be mentioned by one member of the household only. The member of the household who is responsible for paying bills etc. has been selected to report not only personal liabilities but also joint liabilities of the household.

The following questions concern your (outstanding) debts and liabilities. The questionnaire includes the following sections:

- private loans;
- extended lines of credit;
- outstanding debts with mail-order firms;
- loans from family, friends or acquaintances;
- study loans;
- debts ('to be in the red') thru credit cards;
- other loans.

This part of the questionnaire does NOT concern mortgages or being in the red on a checking account.

What is the maximum credit of your [1st thru 5th] extended line of credit?

DEBT BASED ON PAYMENT BY INSTALLMENT: With debts based on payment by installment you do not receive any money, but just the object you bought. The object is your property from the moment you make the deal. You pay a monthly amount on interest and repayment. This sort of credit is common with mail-order firms, for example.

OUTSTANDING DEBT FROM A HIRE-PURCHASE CONTRACT: The situation is the same as with a debt based on payment by installment, with one difference: with hire-purchase the object only becomes your property after the whole sum has been paid off. This sort of arrangement is common with car dealers and audio-visual equipment shops.

EQUITY-BASED LOAN: With this sort of debt, (the paid-off) part of a house (or e.g. stocks) is given in pledge. The interest rate is usually the same as the mortgage interest rate.
